

Skills, Science, Success: Transforming L&D with Data and Psychometrics

Hi \$FirstName%

Managing training in 2025 can feel like **herding cats in a windstorm**: one wrong move, and something (or someone) gets left behind.

But the future of L&D is here. **Personalised learning means tailored plans for individual skills gaps, learning styles, and career goals.**

Align L&D with what it actually needs: Data-driven insights

Leading L&D teams are making decisions grounded in real-time data because what gets measured, gets improved.

With **74% of organisations** agreeing that data-literate teams outperform their peers, L&D teams are shifting focus to tools and skills that turn learning metrics into meaningful decisions. (*Source: DataCamp Data Literacy Report*)

What L&D teams should actually focus on now?

- ✔ **Monitor impact, not just completions** – Track whether learning translates into real-world behaviour change and improved performance.
- ✔ **Spot skill gaps early** – Use learner performance and team metrics to anticipate where training will be needed next.
- ✔ **Tie learning to business goals** – Align your metrics with team KPIs like productivity, sales, or retention to show real ROI.
- ✔ **Adjust fast, using real-time insights** – Let data guide your strategy updates, not quarterly reviews.

When L&D is data-driven, it becomes a strategic partner to the business.

What you'll gain:

- ✔ Clear visibility into what's working and what isn't
- ✔ Less time spent reporting, more time spent improving
- ✔ Faster decision-making when learning gaps appear
- ✔ Confidence when presenting training outcomes to leadership

Our new Psychometric Suite is going LIVE now!

Unsure where to start with auditing your workforce's skills and analysing the gaps? Are your **team's learning paths** really helping them grow, or just ticking boxes?

With **Alison LMS+ Psychometric Suite**, you can now **assess, assign, and advance** your workforce with data-backed insights.

What's inside?

- ✔ **Aptitude Test** – Identify problem-solving abilities and cognitive strengths for better role alignment.
- ✔ **Workplace Personality Test** – Measure soft skills, leadership potential, and team fit.
- ✔ **English language Test** – Evaluate proficiency for roles requiring strong communication.

How can this improve your L&D outcomes?

- ✔ **Smarter talent development** – Assign courses based on actual skill gaps, not assumptions.
- ✔ **Better hiring decisions** – Use test results to shortlist candidates with the right competencies.
- ✔ **Data-driven L&D** – Get actionable insights to personalise learning paths for every employee.

In fact, Psychometric Tests can help you hire better too. **Over 80% of Fortune 500 companies use them to do so.** (*Source: Zippia*)

Insights from Global L&D Leaders

How can AI and psychometric testing transform workforce development?

Dr. Anna Tavis, Clinical Professor of Human Capital Management at NYU: “AI enables L&D teams to personalise learning at scale, but data quality is key. Psychometric assessments provide that foundational data — giving you a clear, validated view of cognitive ability, personality, and skills. When you combine those insights with AI, you're not guessing who needs what — you're designing learning journeys that truly fit.”
